Professional Summary

Computer Science undergraduate specializing in full-stack architecture, high-concurrency backend services, and automated data workflows. Skilled across React, Next.js, Node.js, TypeScript, PostgreSQL, and Python, with demonstrated expertise delivering scalable, production-grade web systems.

Work Experience

Indux Technology – *Full Stack Developer Intern* **Aug 2026 – Present**

- Spearheaded integration of dynamic backend APIs into client-side interfaces, cutting static rendering latency by 35% and boosting active session retention.
- Diagnosed and patched 15+ production UI bugs and race conditions, elevating platform stability to a 99.8% crash-free rate.
- Engineered 8+ modular, cross-platform mobile views using React Native, standardizing component reuse across iOS and Android.

Technical Projects

Student Admission Management System | *Next.js, Prisma, Redis, PostgreSQL* **May 2026 – Jul 2026**

- Architected a fault-tolerant backend system to replace bottlenecked legacy portals, handling peak concurrent registration traffic without timeouts.
- Integrated Redis cache layers, eliminating 60% of redundant database round-trips and processing 500+ student profiles at sub-200ms latency.

AI Web Applications | *React, Next.js, Cursor, Lovable* **Nov 2024 – Mar 2026**

- Formulated complex client architectures and intelligent matching algorithms, leveraging rapid development workflows to cut production cycles by 70%.
- Delivered responsive full-stack applications with modular design tokens, enabling robust multi-device compatibility under tight deadlines.

AI & Automation Workflows | *n8n, OpenAI API, Gmail API, Apify* **Aug 2024 – Dec 2024**

- Orchestrated end-to-end automation pipelines for outbound communications, automated scraping, and data synchronization.
- Eliminated manual data handling, saving 40+ operational hours weekly while scaling pipeline execution volume by 300%.

Neural Network from Scratch | *Python, NumPy* **Oct 2024 – Jan 2025**

- Programmed a vectorized feedforward neural network from first principles, writing mathematical routines for forward/backward propagation and gradient descent.
- Benchmarked performance on the MNIST dataset, achieving an 85% test accuracy on digit classification without external machine learning libraries.

Technical Skills

Languages: JavaScript, TypeScript, Python, C++, SQL
Frontend Development: React, Next.js, Tailwind CSS, shadcn/ui, HTML5/CSS3
Backend & Databases: Node.js, Express.js, PostgreSQL, MongoDB, Redis, Prisma ORM, RESTful APIs
Tools & Cloud: Git, GitHub Actions, n8n, Postman, Cursor, Lovable, Figma, Linux

Education

RMD Sinhgad Technical Institutes Campus **Pune, Maharashtra**
Bachelor of Technology in Computer Science and Engineering *Aug 2024 – Expected Jun 2028*

- Academic Record: SGPA – Sem 1: 8.73 | Sem 2: 8.64 | Sem 3: 8.32

Certifications & Awards

Hackathon Finalist: AMD Developer Hackathon (lablab.ai – San Francisco finals), SuperNova 2.0, and Void Hackathon 8.0.
HackerRank Certifications: Verified in React (Basic) and Software Engineer Intern Assessments.
Competitive Programming: Solved 200+ Data Structures and Algorithms problems across LeetCode.
OpenAI Academy x NxtWave: Selected as State-Level Buildathon Qualifier for practical AI solutions.
Smart India Hackathon 2025: Advanced through national technical evaluation and prototype submission phases.

Leadership Experience

President – TECH Club **Pune, Maharashtra**
Sinhgad Technical Institutes Campus *Aug 2025 – Present*

- Directed a 12-member organizing committee to deliver a flagship inter-college hackathon for 500+ participants and industry sponsors.
- Managed cross-functional student engineering teams to build, test, and maintain tech infrastructure for campus initiatives.
